#### LIST OF COMMON POOL OF GENERIC ELECTIVES (GE) COURSES OFFERED BY DEPARTMENT OF COMPUTER SCIENCE

#### CATEGORY-IV

## CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

#### GENERIC ELECTIVES: PROGRAMMING USING C++

Course title	Credits	Credit distribution of the course			Eligibility	Pre-
& Code		Lecture	Tutorial	Practical/ Practice	criteria	requisite of the course
						(if any)
Programming					Class XII pass	
using C++	4	3	0	1		NIL
C						
Code:						

#### **Learning Objectives**

The Learning Objectives of this course are as follows:

- Introduce programming concepts using C++ to students.
- Develop structured as well as object-oriented programming skills using C++ programming language.
- Achieve competence amongst its students to develop correct and efficient C++ programs to solve problems in their respective domains

#### **Learning Outcomes**

Upon completion of this course, students will be able to:

- Write simple programs using built-in data types of C++.
- Implement arrays and user defined functions in C++.
- Solve problems in the respective domain using suitable programming constructs in C++.
- Solve problems in the respective domain using the concepts of object oriented programming in C++.

#### **SYLLABUS OF GE**

Theory

Unit – 1 Introduction to C++ (9 hours)

#### Unit – 2

Unit – 3

#### **Programming Fundamentals**

Files, Compiling and Executing Simple Programs in C++.

Data types, Variables, Operators, Expressions, Arrays, Keywords, Decision making constructs, Iteration, Type Casting, Input-output statements, Functions

Overview of Procedural and Object-Oriented Programming, Using main() function, Header

#### **Object Oriented Programming**

Concepts of Abstraction, Encapsulation. Creating Classes and objects, Modifiers and Access Control, Constructors, Destructors, Implementation of Inheritance and Polymorphism, Template functions and classes

#### Practical

#### List of Practicals:

1. Write a program to compute the sum of the first n terms of the following series:

 $S = 1 - 2 + 3 - 4 + \dots n$ 

The number of terms n is to be taken from the user through the command line. If the command line argument is not found then prompt the user to enter the value of n.

2. Write a program to display the following pattern:

The number of rows n, is to be taken from the user.

- 3. Write a program to compute the factors of a given number.
- 4. Write a menu driven program to perform the following operations on an array:
  - a. Find the minimum, maximum and average of the array elements
  - b. Search an element in the array using linear and binary search
- 5. Write a menu driven program to perform the following operations on a string:
  - a. Calculate length of the string

#### (15 hours)

### (30 hours)

(21 hours)

## 1

- b. Check whether the first character of every word in the string is in uppercase or not
- c. Reverse the string
- 6. Create a class Triangle. Include overloaded functions for calculating the area of a triangle.
- 7. Create a template class TwoDim which contains x and y coordinates. Define default constructor, parameterized constructor and void print() function to print the co-ordinates. Now reuse this class in ThreeDim adding a new dimension as z. Define the constructors and void print() in the subclass. Implement main() to show runtime polymorphism.

#### **Essential Readings**

- Stephen Prata, C++ Primer Plus, 6th Edition, Pearson India, 2015.
- E Balaguruswamy, Object Oriented Programming with C++, 8th edition, McGraw-Hill Education, 2020.
- D.S. Malik, C++ Programming: From Problem Analysis to Program Design, 6th edition, Cengage Learning, 2013.

#### **Suggestive Reading**

- Herbert Schildt, C++: The Complete Reference, 4th edition, McGraw Hill, 2003.
- A. B. Forouzan, Richard F. Gilberg, Computer Science: A Structured Approach using C++, 2nd edition, Cengage Learning, 2010.

# **Note:** Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.

#### **GENERIC ELECTIVES: PROGRAMMING WITH PYTHON**

# CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title	Credits	Credit distribution of the course			Eligibility	Pre-
& Code		Lecture	Tutorial	Practical/ Practice	criteria	requisite of the course (if any)
Programming with Python	4	3	0	1	Class XII pass	NIL
Code:						

#### Learning Objectives

The Learning Objectives of this course are as follows:

- Introduce programming concepts using Python to students.
- Develop structured as well as object-oriented programming skills using Python.

# • Achieve competence amongst its students to develop correct and efficient Python programs to solve problems in their respective domains.

#### Learning outcomes

On successful completion of the course, students will be able to:

- Write simple programs using built-in data structures in Python.
- Implement arrays and user defined functions in Python.
- Solve problems in the respective domain using suitable programming constructs in Python.
- Solve problems in the respective domain using the concepts of object oriented programming in Python.

#### SYLLABUS OF GE

#### Theory

#### Unit - 1

#### **Introduction to Programming**

Problem solving strategies; Structure of a Python program; Syntax and semantics; Executing simple programs in Python.

#### Unit - 2

#### **Creating Python Programs**

Identifiers and keywords; Literals, numbers, and strings; Operators; Expressions; Input/output statements; Defining functions; Control structures (conditional statements, loop control statements, break, continue and pass, exit function), default arguments.

#### Unit - 3

#### **Built-in Data Structures**

Mutable and immutable objects; Strings, built-in functions for string, string traversal, string operators and operations; Lists creation, traversal, slicing and splitting operations, passing list to a function; Tuples, sets, dictionaries and their operations.

#### Unit - 4

#### File and Exception Handling

File handling through libraries; Errors and exception handling.

#### Practical

#### **List of Practicals:**

- 1. WAP to find the roots of a quadratic equation.
- 2. WAP to accept a number 'n' and
  - a. Check if 'n' is prime
  - b. Generate all prime numbers till 'n'

### (15 hours)

(6 hours)

### (15 hours)

### (9 hours)

#### (30 hours)

### . .

- c. Generate first 'n' prime numbers
- d. This program may be done using functions.
- 3. WAP to create a pyramid of the character '\*' and a reverse pyramid

*	
***	
****	
*****	
*****	
	*****
	*****
	*****
	***
	*

- 4. WAP that accepts a character and performs the following:
  - a. print whether the character is a letter or numeric digit or a special character
  - b. if the character is a letter, print whether the letter is uppercase or lowercase
  - c. if the character is a numeric digit, prints its name in text (e.g., if input is 9, output is NINE)
- 5. WAP to perform the following operations on a string
  - a. Find the frequency of a character in a string.
  - b. Replace a character by another character in a string.
  - c. Remove the first occurrence of a character from a string.
  - d. Remove all occurrences of a character from a string.
- 6. WAP to swap the first n characters of two strings.
- 7. Write a function that accepts two strings and returns the indices of all the occurrences of the second string in the first string as a list. If the second string is not present in the first string then it should return -1.
- 8. WAP to create a list of the cubes of only the even integers appearing in the input list (may have elements of other types also) using the following:
  - a. 'for' loop
  - b. list comprehension
- 9. WAP to read a file and

- a. Print the total number of characters, words and lines in the file.
- b. Calculate the frequency of each character in the file. Use a variable of dictionary type to maintain the count.
- c. Print the words in reverse order.
- d. Copy even lines of the file to a file named 'File1' and odd lines to another file named 'File2'.
- 10. Write a function that prints a dictionary where the keys are numbers between 1 and 5 and the values are cubes of the keys.
- 11. Consider a tuple t1=(1, 2, 5, 7, 9, 2, 4, 6, 8, 10). WAP to perform following operations:
  - a. Print half the values of the tuple in one line and the other half in the next line.
  - b. Print another tuple whose values are even numbers in the given tuple.
  - c. Concatenate a tuple t2=(11,13,15) with t1.
  - d. Return maximum and minimum value from this tuple
- 12. WAP to accept a name from a user. Raise and handle appropriate exception(s) if the text entered by the user contains digits and/or special characters.

#### **Essential Readings**

- Taneja, S., Kumar, N., Python Programming- A modular Approach, Pearson Education India, 2018.
- Balaguruswamy E., Introduction to Computing and Problem Solving using Python, 2nd edition, McGraw Hill Education, 2018.

#### **Suggestive Reading**

- Brown, Martin C., Python: The Complete Reference, 2nd edition, McGraw Hill Education, 2018.
- Guttag, J.V. Introduction to computation and programming using Python, 2nd edition, MIT Press, 2016.

# **Note:** Examination scheme and mode shall be as prescribed by the Examination Branch, University of Delhi, from time to time.
